{

  "message": "User updated with success!"

}
```

ID number	#3
Name	API-test creating wrong or empty users info
Reporter	Bassel Essam
Submit Date	24/03/2024
Summary	When I create new user, if I insert empty or illogical data , the user will be inserted.
Browser	Chrome
Severity	Major
Priority	High

Description

When I create new user, if I insert empty or illogical data , the user will be inserted.

Steps to reproduce

> create new user

> add empty or illogical data

> user created successfully

Expected result

The system should validate user input to ensure that required fields are filled with appropriate data.If the user enters invalid data or leaves required fields blank, an error message should be displayed, preventing the creation of a user account.

Actual result

The system creates a user account regardless of the input provided in the required fields. No validation occurs, allowing users to enter any value or leave fields blank without encountering any errors.
